Field Trip with Environment Services Staff to
Tupapa Catchment where extensive farming for
Taro paddy is done by the land owners.

Extensive farming at Tupapa Catchment area for Taro Paddy Which is grown in water.

Avatiu Intake filtration where water passes through a fibre blanket

Avatiu water intake- pipes are laid under the sand for filtration purpose. The intake dries up when there is no rain

At only one intake some sort of mechanical (Arkal Filters) are placed after the intake

Tupapa intake – the water gets muddy in rainy season and since there is no filters or storage tanks, the mud gets into the distribution pipes
